Transparent LED Display Manufacturer

Transparent LED display

- The LED transparent screen is the first new concept LED display proposed in 2013. The name is to distinguish it from the traditional LED display, light bar screen and glass screen. In just a few years, the concept of "transparent LED display" has been promoted in a large area. Many products in the industry include glass screens, light bar screens, grill screens, curtain screens, grids, screens, etc. This naming triggered a "transparent LED display" boom.
- LED transparent screen, as its name suggests, is based on "transparency". The objective performance of the traditional screen is opaque and airtight, resulting in many problems such as excessive screen body, poor heat dissipation, complicated structure, high power consumption, and abrupt shape. This has given birth to a "transparent LED display" .

PART.01

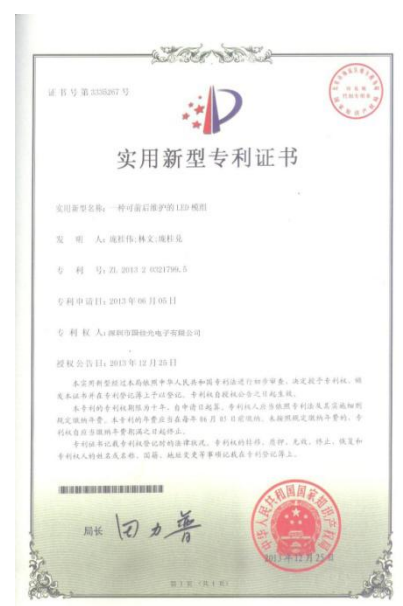

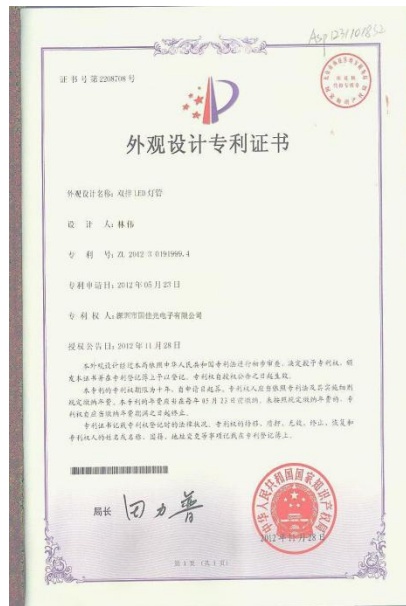

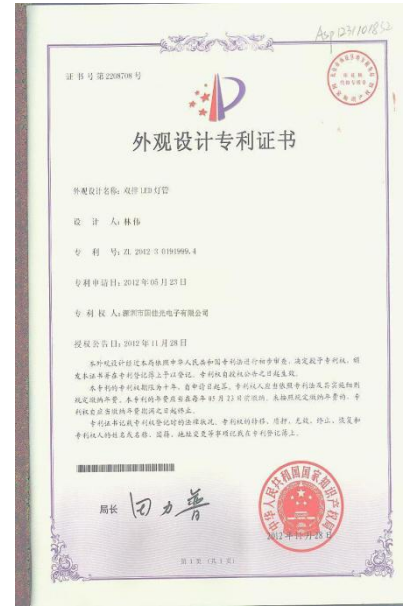

(Company profile)

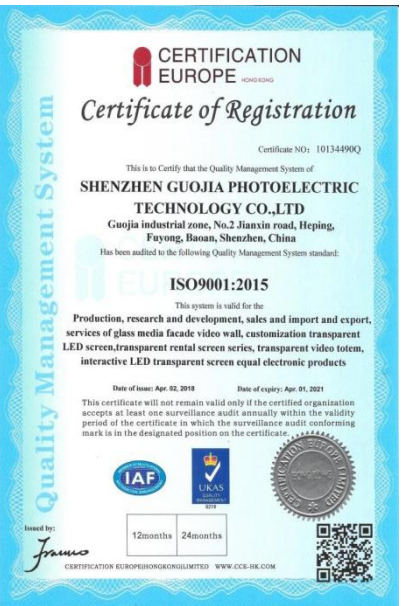

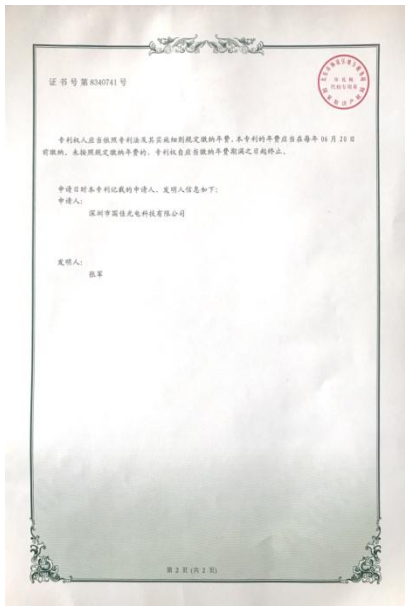

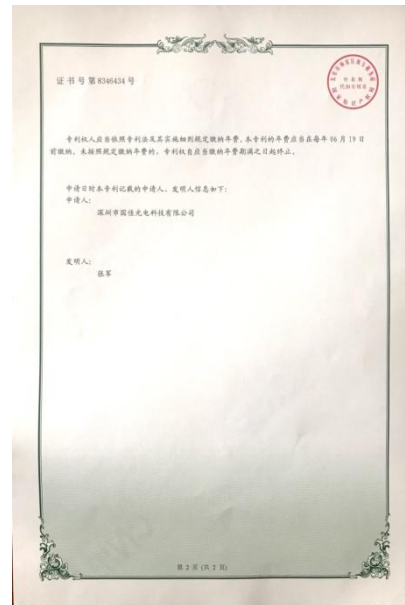

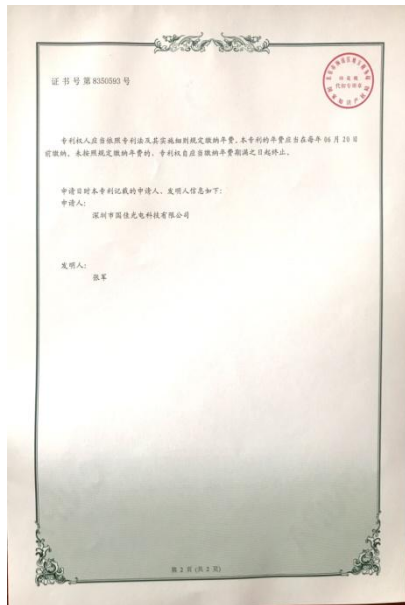

- Shenzhen Guojia Optoelectronics Co., Ltd. is a subsidiary of Guojia Group. It is a high-tech enterprise (registered capital of 50 million) to focus on LED manufacturing, research and development, design, sales and engineering services.
- The company's main products are LED transparent screen, LED window display screen, LED screen, LED lamp screen and LED lighting and other applications. The company has professional production equipment and excellent technology, senior and experienced management team, professional technical development staff, skilled and well-trained workers with many years of operating experience. The company strictly enforce the 7S management standards and industry standards, has passed ISO9001-2000 / 3C / CE / FCC / ROHS quality system certification, reliable quality, advanced technology, cutting-edge technology, fully automated production equipment, large sales network and good service are the fundamental elements that enable us to provide high-quality products. Our products are exported to North America, Europe and the Middle East and other overseas markets, such as Sweden, Britain, Italy, Germany, Romania, Serbia, Poland, Turkey, Israel, Spain, Portugal, the United States, cartels, Singapore and more than 110 countries.

(Organizational structure)

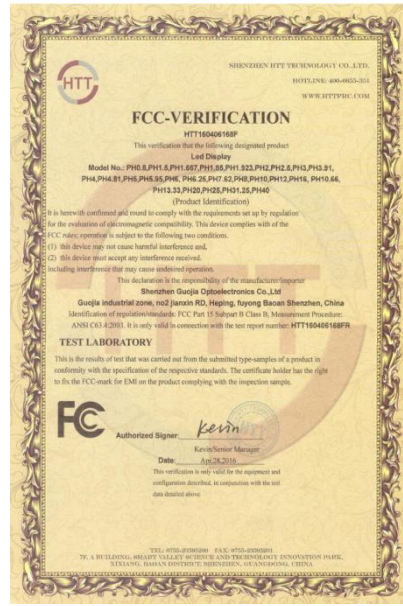

(Invention patent, utility model, design)

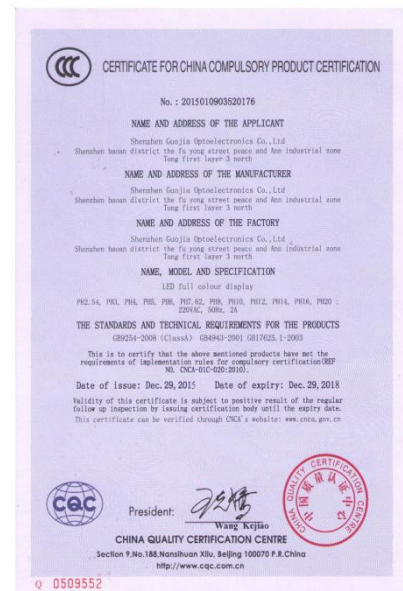

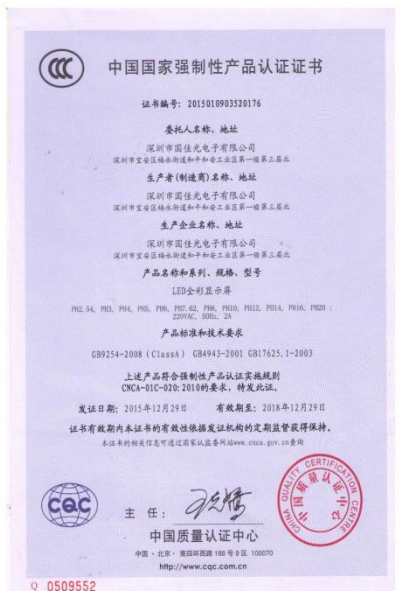

(Certification certificate)

- Passed CCC China National Compulsory Product Certification
- FCC certified
- Passed CE certification
- Passed RoHS certification
- Pass energy certification
- Pass waterproof certification
- Rigorous testing by third-party authorities :
- Passive test
- High and low temperature test qualified
- Harmonic current test qualified
- Qualified for voltage fluctuation test
- Flicker test qualified
- Qualified for vibration test
-

PART.02

(Company Culture)

- 
- Corporate values:
 - Innovation and development, the pursuit of excellence。
 - Enterprise spirit:
 - Pioneering、 innovative、 realistic and dedicated。
 - Development goals:
 - To create a modern enterprise with international competitiveness。
 - Team awareness:
 - one heart and one mind, unity and hard work; sincere cooperation, advance together。
 - Business Principle:
 - Good faith wins the world。
 - Service Principle:
 - Professional, dedicated, providing quality products and excellent service。
-

PART.03

(Product introduction)

Product introduction

- Transparent screen: transparent LED display, just as its name implies, is a LED display that has the property to let light pass through, just like glasses. With high permeability, ultra-light features, it is an innovation of strip screen, and improvements on SMD manufacturing process, packaging and control system. With hollow structure design, eliminated components that blocking sight, the perspective effect is maximized.
- At the same time, it also has unique display effect, when the audience standing at an ideal distance, the picture seems to suspend on the glass curtain wall. LED transparent screen let LED display to expand the application area to building glass wall and shopping window, it has become a new trend in new media market.
- Along with the outdoor advertising, the LED screen is flooded with a series of negative issues, including urban image problems. LED display can play the function of city lighting and information spread, but in the off time it is like a piece of "city scar", misfit the surrounding environment, greatly affected the city's appearance, destroyed the city scenery.
- As a result of these problems, the regulation and approval of outdoor large screen installation become more and more complicated, and the management of outdoor advertisement is becoming more and more strict.

Product introduction

- Transparent LED display not only integrates all the advantages of the conventional outdoor high-definition LED display, but also eliminates the problem of urban image to the maximum. Because it is installed in the rear of the glass curtain wall, even if it is not working, it will not have any impact on the surrounding environment. At the same time, because it is indoor advertising to play to outdoor audiences, so it can avoid the approval of outdoor advertising.
- In addition, with the development of city construction, glass curtain wall has gradually become popular, transparent Led display with its thin, no steel structure, easy installation and low maintenance, is becoming a best partner with glass curtain wall, not only it has no sense of intrusion, it is fashionable and beautiful, adding atmosphere of modern science and technology to the city building. Therefore, LED transparent screen in the market has won everyone's support, and received widespread attention
- LED transparent glass is suitable for medium size LED display advertising application, in the absence of direct sunlight conditions it can be used in daytime, module size can be customized for glass curtain wall to achieve seamless splicing. As long as there is a glass curtain wall, this product can be applied. Such as banks, shopping malls, theaters, commercial streets, chain stores, hotels, municipal public buildings, landmarks, etc.

Contrast with traditional screen: the advantage of transparent screen

● 01.

High transparent effect

with high transparency rate of 60% - 95%, ensure the lighting requirements and angle between floors, glass windows, facade lighting structure. Small space occupation, light weight. The display thickness is only 10cm, the display screen body weight only 15Kg/m².

● 02.

No steel frame construction

No steel frame construction, save a lot of installation and maintenance costs. Directly fixed on the glass curtain wall.

Unique display effect: because the display background is transparent, the advertisement picture can be suspended on the glass curtain wall, shows good advertisement effect and artistic effect.

● 03.

Convenient maintenance

Indoor maintenance, quick and safe, save manpower and material resources. no traditional air conditioning cooling system, save more than 35% energy than ordinary LED display.

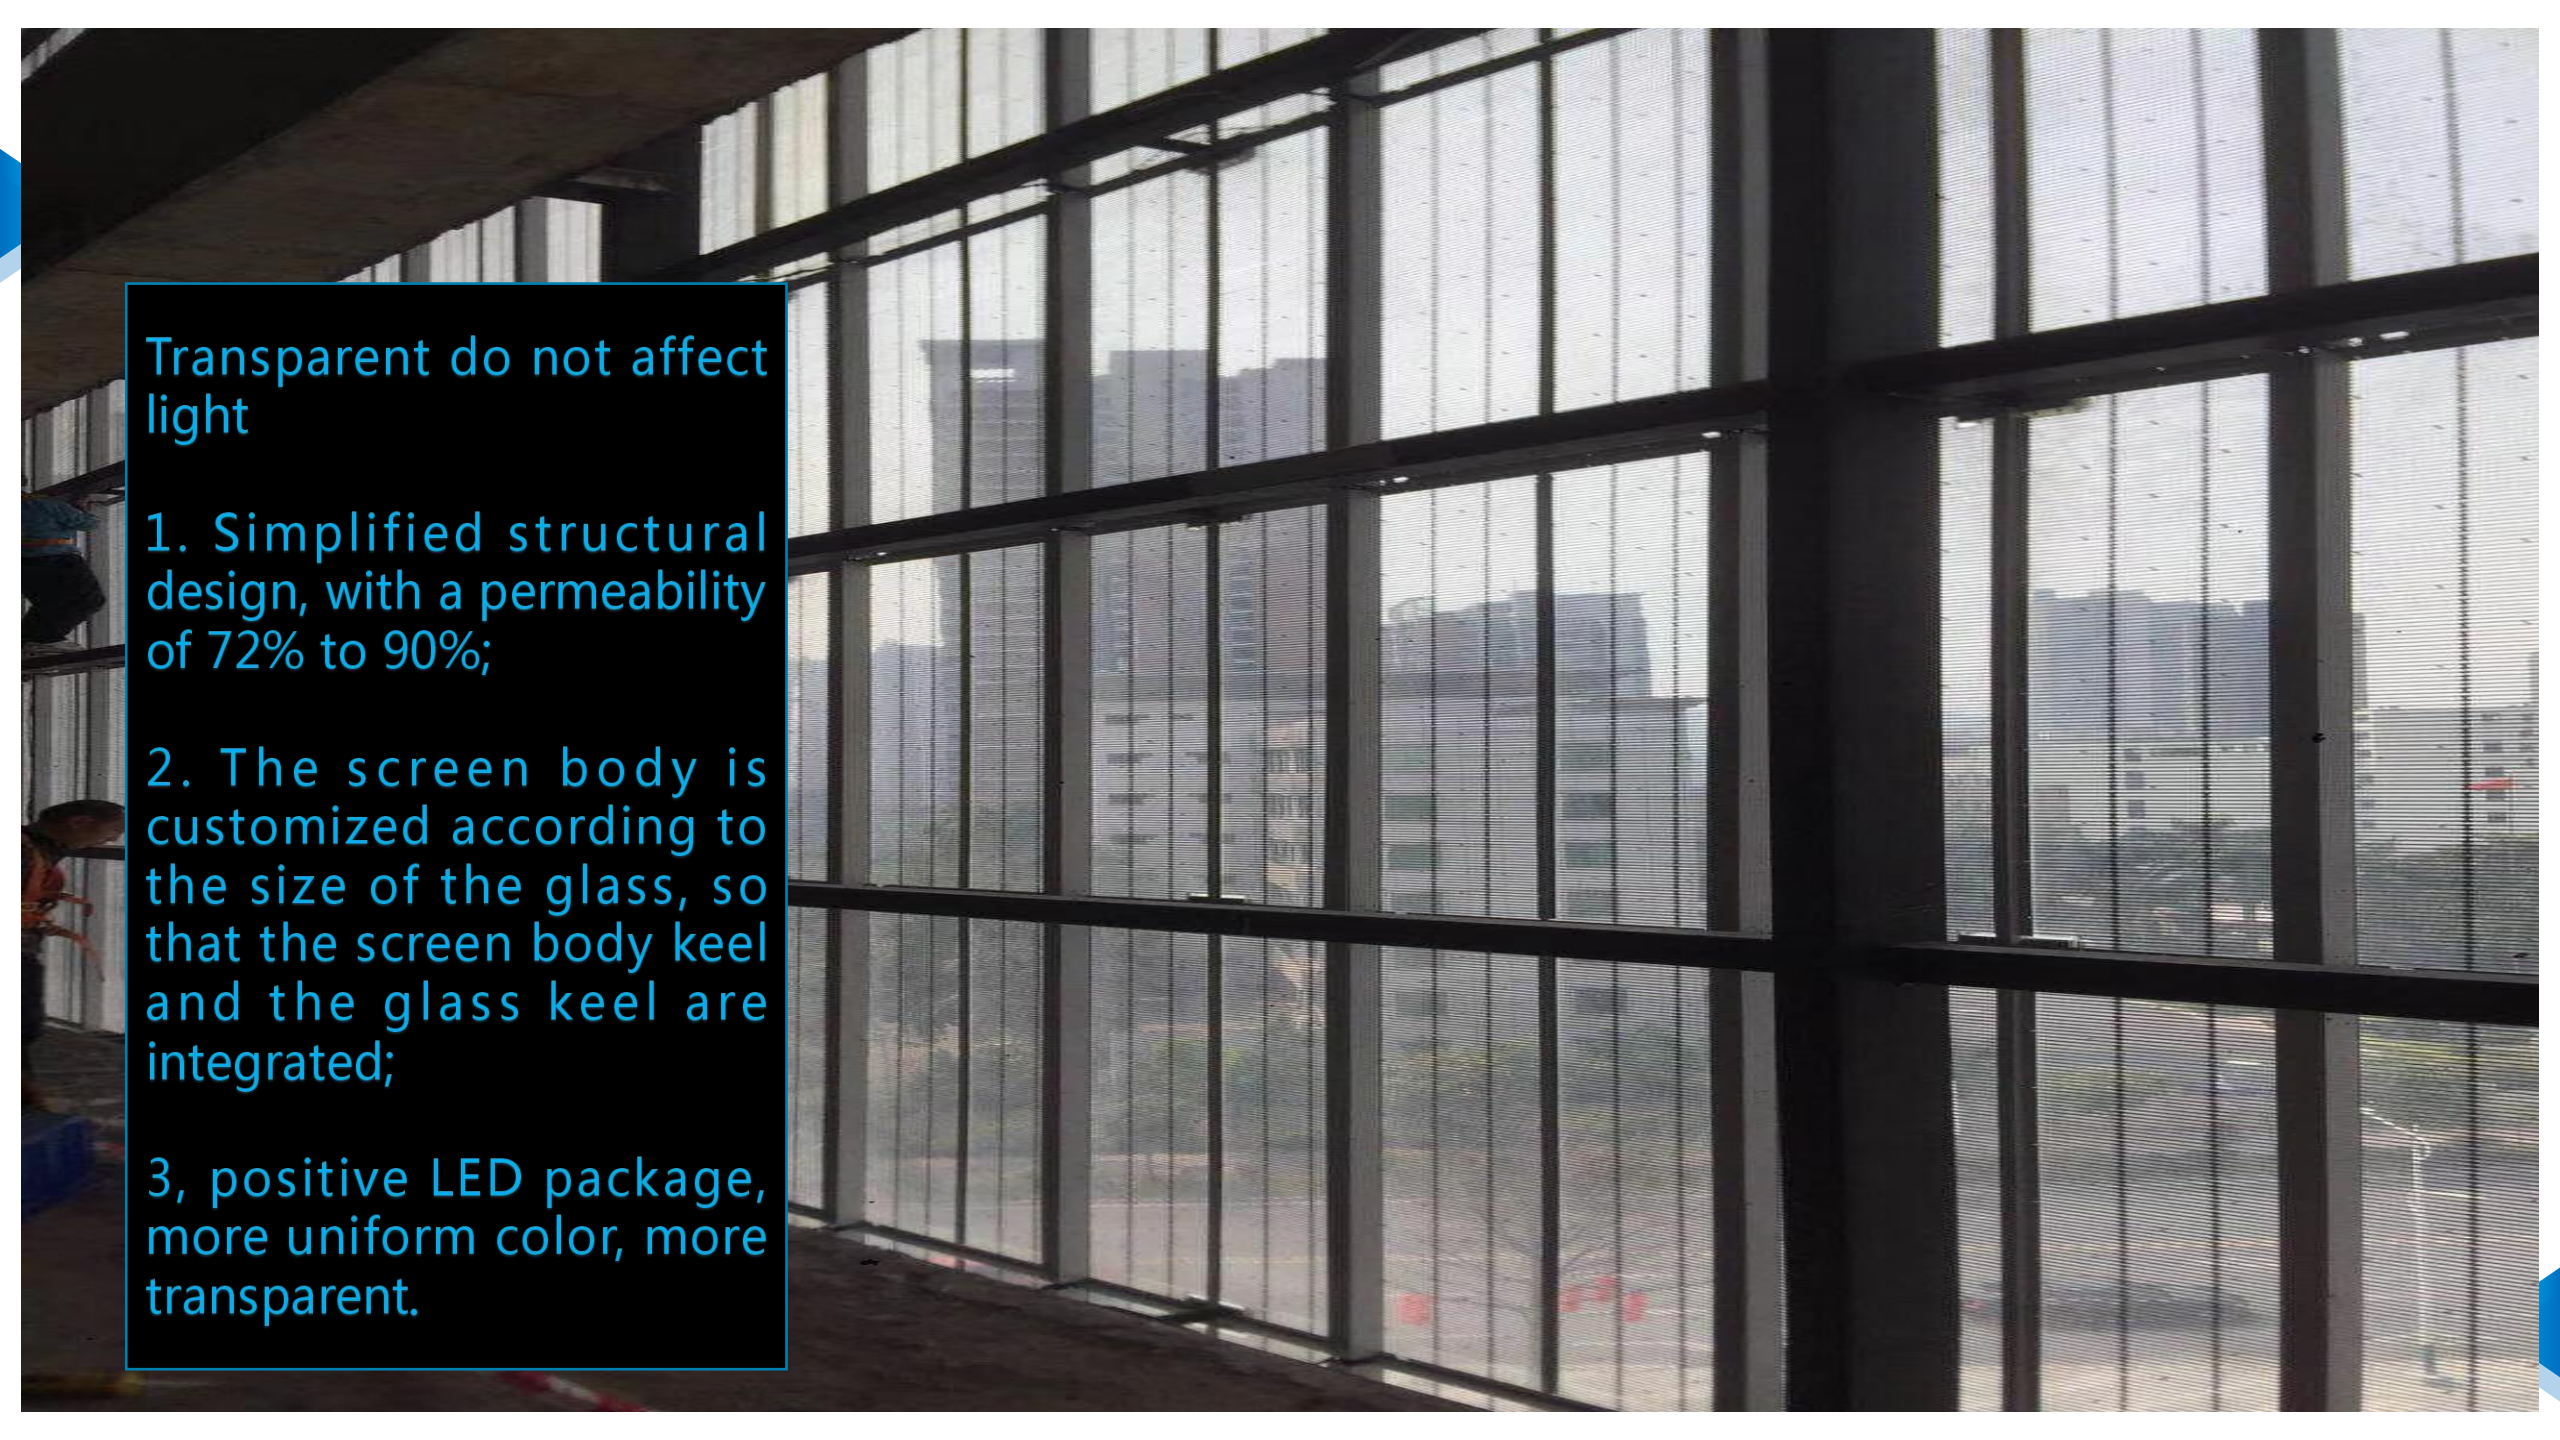

Indoor installation, outdoor viewing

Screen body indoor installation, easy to maintain more secure; outdoor viewing do not need architectural design institute audit, or easily passed the audit;

Light Thin , Without steel structure

Ultra-light and thin screen body, 12kg~15kg/case, can be directly attached to the original glass curtain wall keel structure installation, without additional installation of steel structure, saving space and installation cost;

Transparent do not affect light

1. Simplified structural design, with a permeability of 72% to 90%;

2. The screen body is customized according to the size of the glass, so that the screen body keel and the glass keel are integrated;

3, positive LED package, more uniform color, more transparent.

(Window LED series)

有机玻璃外壳 + 增强型复合材料。
低压高效供电, 自动散热, 节能环保。
精湛工艺, 高品质, 寿命长达 100,000 小时。

Plexiglass casing + reinforced composite material, low-voltage and high-efficiency power supply, automatic heat dissipation, energy saving and environmental protection, exquisite craftsmanship, high quality, long life of up to 100,000 hours.

在连锁品牌店, 大型商场, 展览中心, 机场, 地铁站, 高铁站, 汽车 4S 店, 珠宝展示店, 银行等室内环境中, 理想保留了空间的视觉深度, 让 LED 透明屏的显示效果更具视觉冲击力和层次感。

In chain stores, shopping malls, exhibition centers, airports, subway stations. High Speed Rail Station. In the indoor environment of automobile 4s shop, jewelry display shop, bank, etc., it is ideal to preserve the visual depth of the space, so that the display effect of LED transparent screen is more visual impact.

LED transparent screen breaks through the traditional style to create a sense of space.

In recent years, we are starting to see some of the larger stage concert venues such as the transparent LED screen, such as China's access to the Internet 22 years theme parties, the G20 summit held in Hangzhou to Diva Faye Wong "A" Magic Music Concerts, and so on, through the LED transparent screen to build a kind of spatial art effect, the artistic conception of the dream in front of the audience's eyes, also attracted many stage creators of eyeballs, let us see the transparent LED screen applications in the field of stage design space.

In particular, nowadays, the development of modern society, stage art needs to break through the traditional stage style and go to the larger living space, namely the large-scale performing arts. Large-scale performing arts activities, especially the need to fully demonstrate high-tech factors, once involved in art domain, will greatly change the audience appreciate the conventional habits, to expand the space of art show to adjust people's aesthetic values. And the emergence of LED transparent screen, is meeting the current dance beauty to realize the demand of virtual reality space. "The two dimensions of the LED display are in conflict with the real space of the scene," said Chen Xiaolin, a choreographer at the national CCTV national level. The occlusion characteristics of the flaky structure and the space of the scene create the design restriction. Overcoming this limitation is a problem for designers to avoid." For this reason, the LED transparent display screen has made up for the lack of traditional LED screen. LED display screen according to stage modelling diversity, transparent screen hanging strewn at random have send, show the overall depth of stage framework, using the screen itself fully, frivolous, dazzle colour features, have very strong perspective effect, make the whole picture of the depth of field. At the same time completely not obstruct stage design to leave the space that the light suspensions and play, give a certain atmosphere and feeling to the whole stage, can express the theme more. In the future, with the continuous improvement of LED transparent screen technology, the leasing road of LED transparent screen will achieve greater development space.

Transparent LED screen Market forecast

In the past two years, LED transparent screen began to shine **on both indoor and outdoor site**, commercial and stage areas. With **innovation**, highly transparency, strong sense of science and technology, and more in line with the environment, LED transparent screen quickly get high-end commercial display market. **As well as** fashion, science and technology establishments of all ages, opened up a dedicated path in a highly competitive market.

The translucent features, can give people **amazing** visual experience, **the brightness**, seamless with the building exterior, greatly **increase the appearance of building**. More and more businesses have chosen LED transparent screen to decorate the glass curtain wall construction.

In the commercial **area, it more suits for** fashion brands, high-end products. **They all like** transparent LED screen to bring the style of the brand and products. When playing promotional content, the transparent background not only increases the sense of technology, but also highlights the product itself, making high-end brands such as automobiles, fashion clothing and jewelry more attractive **by our** transparent screen.

Different from the bulky appearance of the **old style LED** display, the thin and beautiful LED transparent screen features will continue to help develop **the** market. As early as 2012, the U.S. investigation agency predicted that by 2025 the market output will be about 87.2 billion U.S. dollars. In today's commercial display, stage display, outdoor digital advertising and other fields show growing demand situation, LED transparent screen market volume will also be more and more, therefore, LED transparent screen market prospects are very broad, its future The potential for development is limitless.

Transparent screen aging test

**Company
news**

China International Optical Expo (CIOE) was held at the Shenzhen Convention and Exhibition Center from September 6th to 9th, 2016. In the same period, it included optical communication exhibition, laser infrared exhibition, precision optics/lens and camera module exhibition, LED technology and application exhibition, sapphire Technology and touch screen exhibition, the total exhibition area is 110,000 m², and more than 3,200 well-known domestic and foreign optoelectronic companies are expected to exhibit.

Guojia Optoelectronics took the outdoor small pitch to the booth.

The 13th Shanghai International LED Exhibition (LED China) will be held at the Pudong New International Expo Center in Shanghai on September 20-22, 2017. It is one of the most influential and highest-level LED industry events in the world. Recognized by the industry as the "wind vane" for the development of the LED industry. There are six exhibition halls in the eight exhibition halls, and more than 1,200 exhibiting companies compete on the same stage to present the latest technologies and products from traditional advertising signs to digital advertising. Guojia Optoelectronics carries new LED transparent screens to open, The inclusive gesture has carefully designed a cutting-edge, perfect LED transparent screen feast.

March 3-6, 2018 Guangzhou International LED Exhibition

-Guojia Optoelectronics Brings New Products (Transparent Screen) at the Exhibition

In 2017, the UK LED screen company customers signed a transparent screen contract agreement with Guojia Optoelectronics, and our company successfully entered the UK transparent screen market.

In 2017, Australian customers and Guojia Optoelectronics signed a transparent screen agency strategy agreement, and our company successfully entered the Australian market.

Guojia Optoelectronics July 20-21, 2016 All sales elite training

On November 4th, 2017, Guojia Optoelectronics business elite made the four groups of members become a strategic team that can truly find problems and solve problems through the expansion project. Everyone has their own duties and responsibilities, and in the expansion project. Looking for the golden point of cooperation, and constantly forming a tacit understanding, this relationship is composed of a loose individual into a combination that can break through any defense line. Each member of the team enhances the confidence and courage to overcome difficulties in the progress of the project. It has improved the determination to face the difficulties but to persevere in the end. What is more valuable is to exercise the courage of each member and overcome the thinking style that sometimes only relies on feelings. Nothing is impossible, and surpassing oneself can create miracles.
