MOBILE APPLICATION links the patient with all the in-home and remote care stakeholders on the team

PRESSURE SENSOR
records and reports
when chair is used

DOOR
records and reports
when a door is used

BED
monitors when
movement is
registered

**HUMIDITY &
TEMPERATURE**
identifies when
there is a change

MOVEMENT
senses when
movement is
recognized

How does it work?

After a short interview with our Care Team, a few easy to install sensors are placed around the client's residence. The K360 system analyzes the client's activity data over time and learns their patterns of everyday living. The Care Team is then alerted when the system identifies an occurrence day or night that is out of their normal pattern.

The system uses cutting edge machine learning technology to establish these patterns so that the alerts are not intrusive but do identify any potential concerns. The Care Team are there 24/7/365 as a personal 911 service for the client. They will address each alert and notify the client's designated family/ loved ones through a secure mobile application. In those rare cases when an alert is an emergency, the Care Team takes all the appropriate steps including ambulance service.

Karantis360 is an
award-winning
IBM partner for
independent
living
technology

How much does it cost?

For less than \$3 a day our senior clients and their families are connected through award winning independent living technology and a 24/7 virtual care team that is linked to the client's treating physicians. Using this service is helping keep our senior clients independent and out of expensive care alternatives.

This affordable aging in place solution provides the safety and security for our senior clients to maintain their independence.
