

## Never Miss a Word

These are some of the most common things patients express with the VidaTalk App. This is what's being missed.

**VidaTalk is a first-in-kind enterprise app helping patients and their caregivers overcome speech and language barriers to communicate effectively.**

### Computer Interpretation

Simple and intuitive autotranslation empowers staff and patients during routine care

### Human Interpreters

Connects on-demand interpreters with every Language Access Vendor in every room.

### Instant Rollout

Installs on any WiFi device for secured and instant rollouts at every bedside.

### Robust Analytics

Use analytics reports emboldens healthcare facilities to measure their impact on health disparities and take credit for quality care.

### Speechless No More

Touch-to-speech interface provides a voice for the speechless.

### Anywhere, Everywhere

Enterprise licensing offers unlimited access so even patients can install VidaTalk on their own devices.

## The Problem

Non-English speaking patients have 70% LESS verbal interactions with staff, leaving those patients vulnerable to missed pain or crucial changes in symptoms and conditions.

## Our Solution

VidaTalk has over 40 language profiles built in with validated pre-set communications for routine care. VidaTalk ensures clear communication is always available for all-- without being billed per minute.

## Language Access During Routine Care

## Human Interpreters

## The Problem

83% of nurses avoid using interpreters because they're too difficult to access and is disruptive to their workflow. Interpreter-by-phone or video has increasing wait times and designated interpreter computers can be hard to track down, both taking crucial time away from overloaded nursing staff.

## Our Solution

VidaTalk is installed on existing bedside tablets and providers phones, dramatically increasing the accessibility of human interpreters for every healthcare conversation.

## The Problem

Intubated and trached patients resort to pointing and hand gestures to communicate with staff. Charades has no place in healthcare.

## Our Solution

VidaTalk's patented touch-to-talk interface allows speechless patients to communicate through the app. VidaTalk has included the most common healthcare statements, with big, easy buttons requiring very little dexterity.

## Speech for the Speechless
