

BITPoint Latam Press Release

BITPoint consolidates crypto-to-fiat exchange leadership in Latin America with launch in Ecuador

- www.bitpoint.com.ec – Japanese crypto-to-fiat exchange operator lands in Ecuador to introduce its compliant exchange model as first formal exchange operator in the country.
- BITPoint allows people and corporations to operate buying and selling crypto assets by depositing and withdrawing money from and to their local bank accounts in Ecuador.
- BITPoint Ecuador offers trading pairs of USD against Bitcoin (BTC), Ethereum (ETH), Bitcoin Cash (BCH), Ripple (XRP) y Litecoin (LTC) at highly competitive prices and has professional features as margin trading for USD/BTC.
- Ecuador becomes the third country in Latin America where BITPoint has opened operations in 2019, after launches in Panama and Peru.

BITPoint offers its users in Latinamerica:

- 1) Buy and sell the main crypto assets using local currency, fast and compliant.
- 2) Secure transactions and crypto funds management.
- 3) User friendly platform, available for desktop and mobile devices, suitable for novice and professional traders with their Margin Trading and Stop Loss feature. Market and Limit orders are available for all crypto assets supported.
- 4) High liquidity and market depth for the fast compensation on high volume transactions.

“We are glad to officially announce the next step in our regional expansion enabling Ecuadorians secure access to crypto assets” as Julian Geovo, Operations Director BITPoint Latam mentions and who adds: ***“The Industry keeps growing and we have seen a consistent demand in the region. Ecuadorian residents now have a formalized options to access a world class trading platform to participate in the digital assets market.”***

About BITPoint Latam

BITPoint embarks in Latin America in 2019 with an ambitious expansion plan, starting with Panama and Peru as initial launches, followed by Ecuador as third market to consolidate the regional leadership position in the industry.

BITPoint Latam has advanced-cutting edge technology used in Japan and self-regulates their operations according to processes, protocols and standards implemented under the Japanese government license.
