CORAS Continuity of Operations Tool (COOP)

COVID-19 COOP

With the onset of the COVID-19 Corona virus and the President's national guidelines, our client in the Department of Defense had an immediate need for an efficient work management solution. Specifically, they required something to provide for the planning, scheduling, execution and tracking of their personnel, employees and contractors, both in and out of the Pentagon during this emergency period of social distancing. Keeping track of personnel was a very tedious and labor driven effort for our customer and their search for a better way led them to CORAS. An agile company with a deep understanding of mission success, CORAS replaced our DoD customer's processes with an intuitive automated tool, creating efficiency through an effective time-saving app and freeing time to work on more critical activities.

How We Do It

CORAS' COVID-19 Continuity of Operations (COOP) solution provides a simple, clear user experience, delivering Branch leads the ability to plan and track their personnel's daily work schedules, as well as the capability to enter their daily activities. Branch heads are able to update their staff's schedule as well as view and report on personnel in their own branches and across branches. Capabilities include: hours worked, products being working on, and work location (i.e. - telework or onsite at the Pentagon). Other critical data components captured include: branch and type of personnel civil, military, contractor), if the resource is approved for Pentagon Parking, Special Handling situations such as at-risk items including sickness or children at home, and whether personnel require special assistance or are experiencing connectivity issues.
