New Knowledge of CD34 Stem Cell

Stem cells are the source of life and play a crucial role in our daily lives and health. Responsible for immune function, repair, and regeneration.

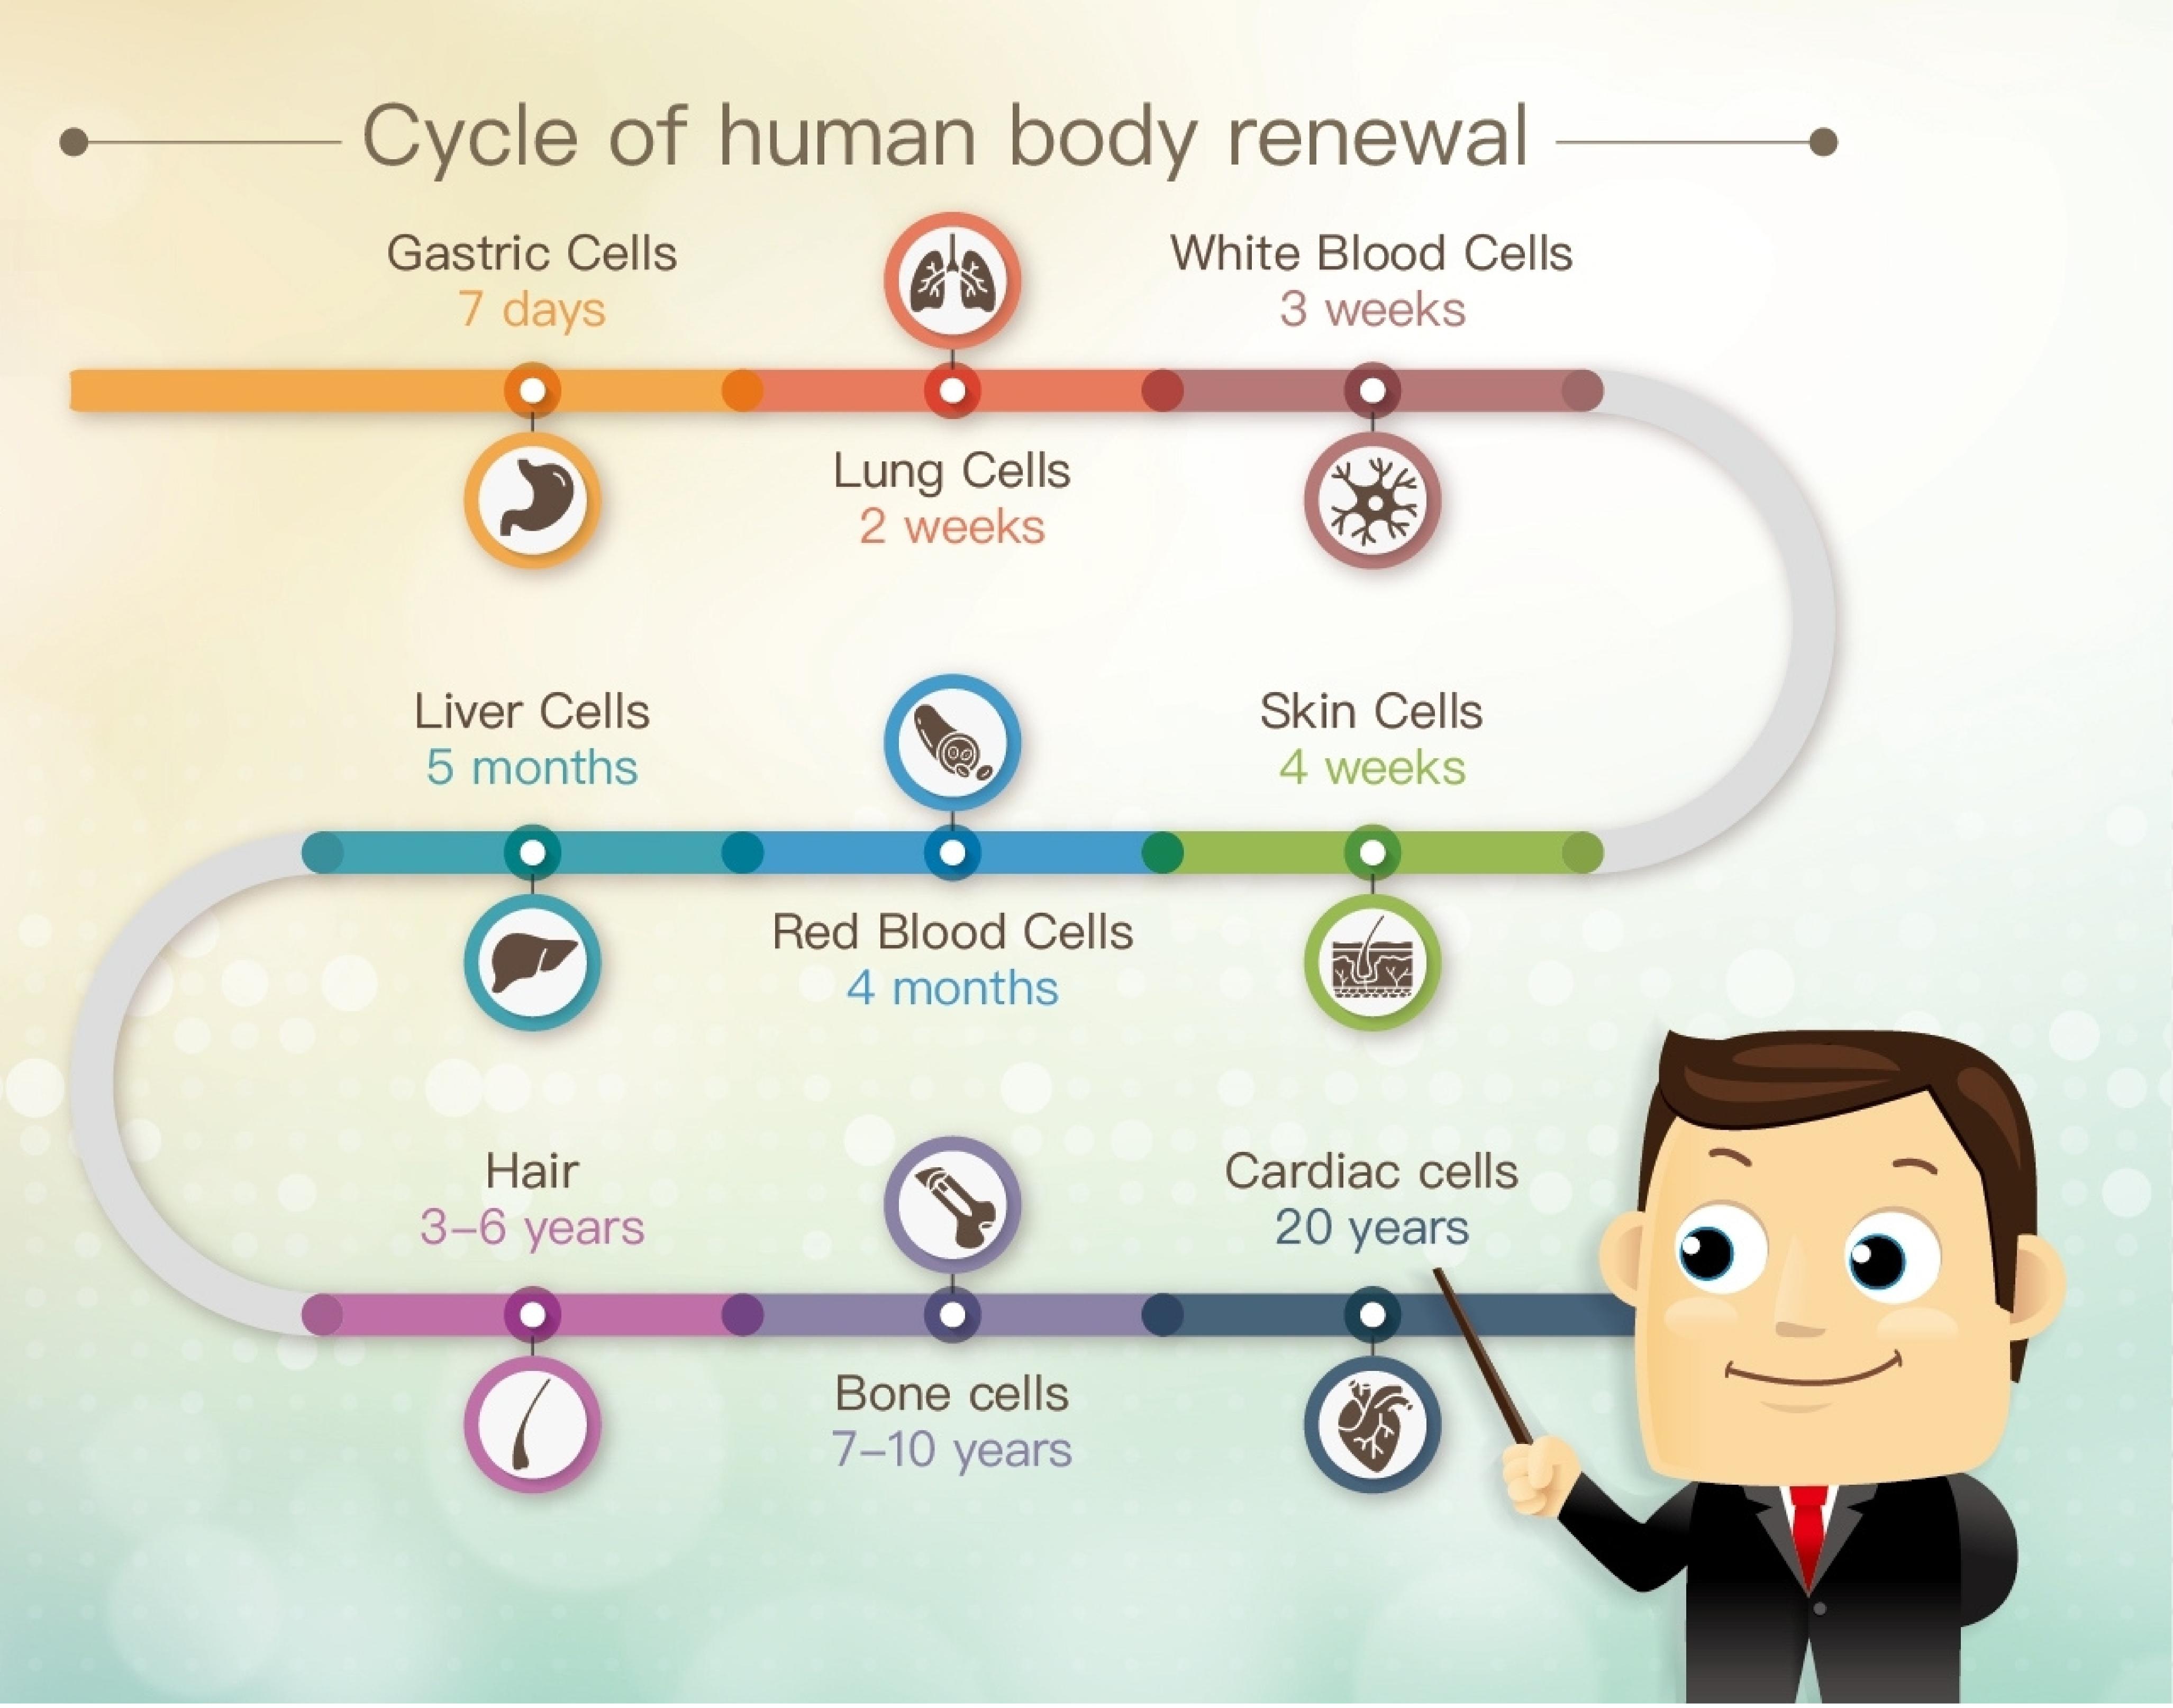

CD34 Health Deposit

The regeneration time required for different organs varies.

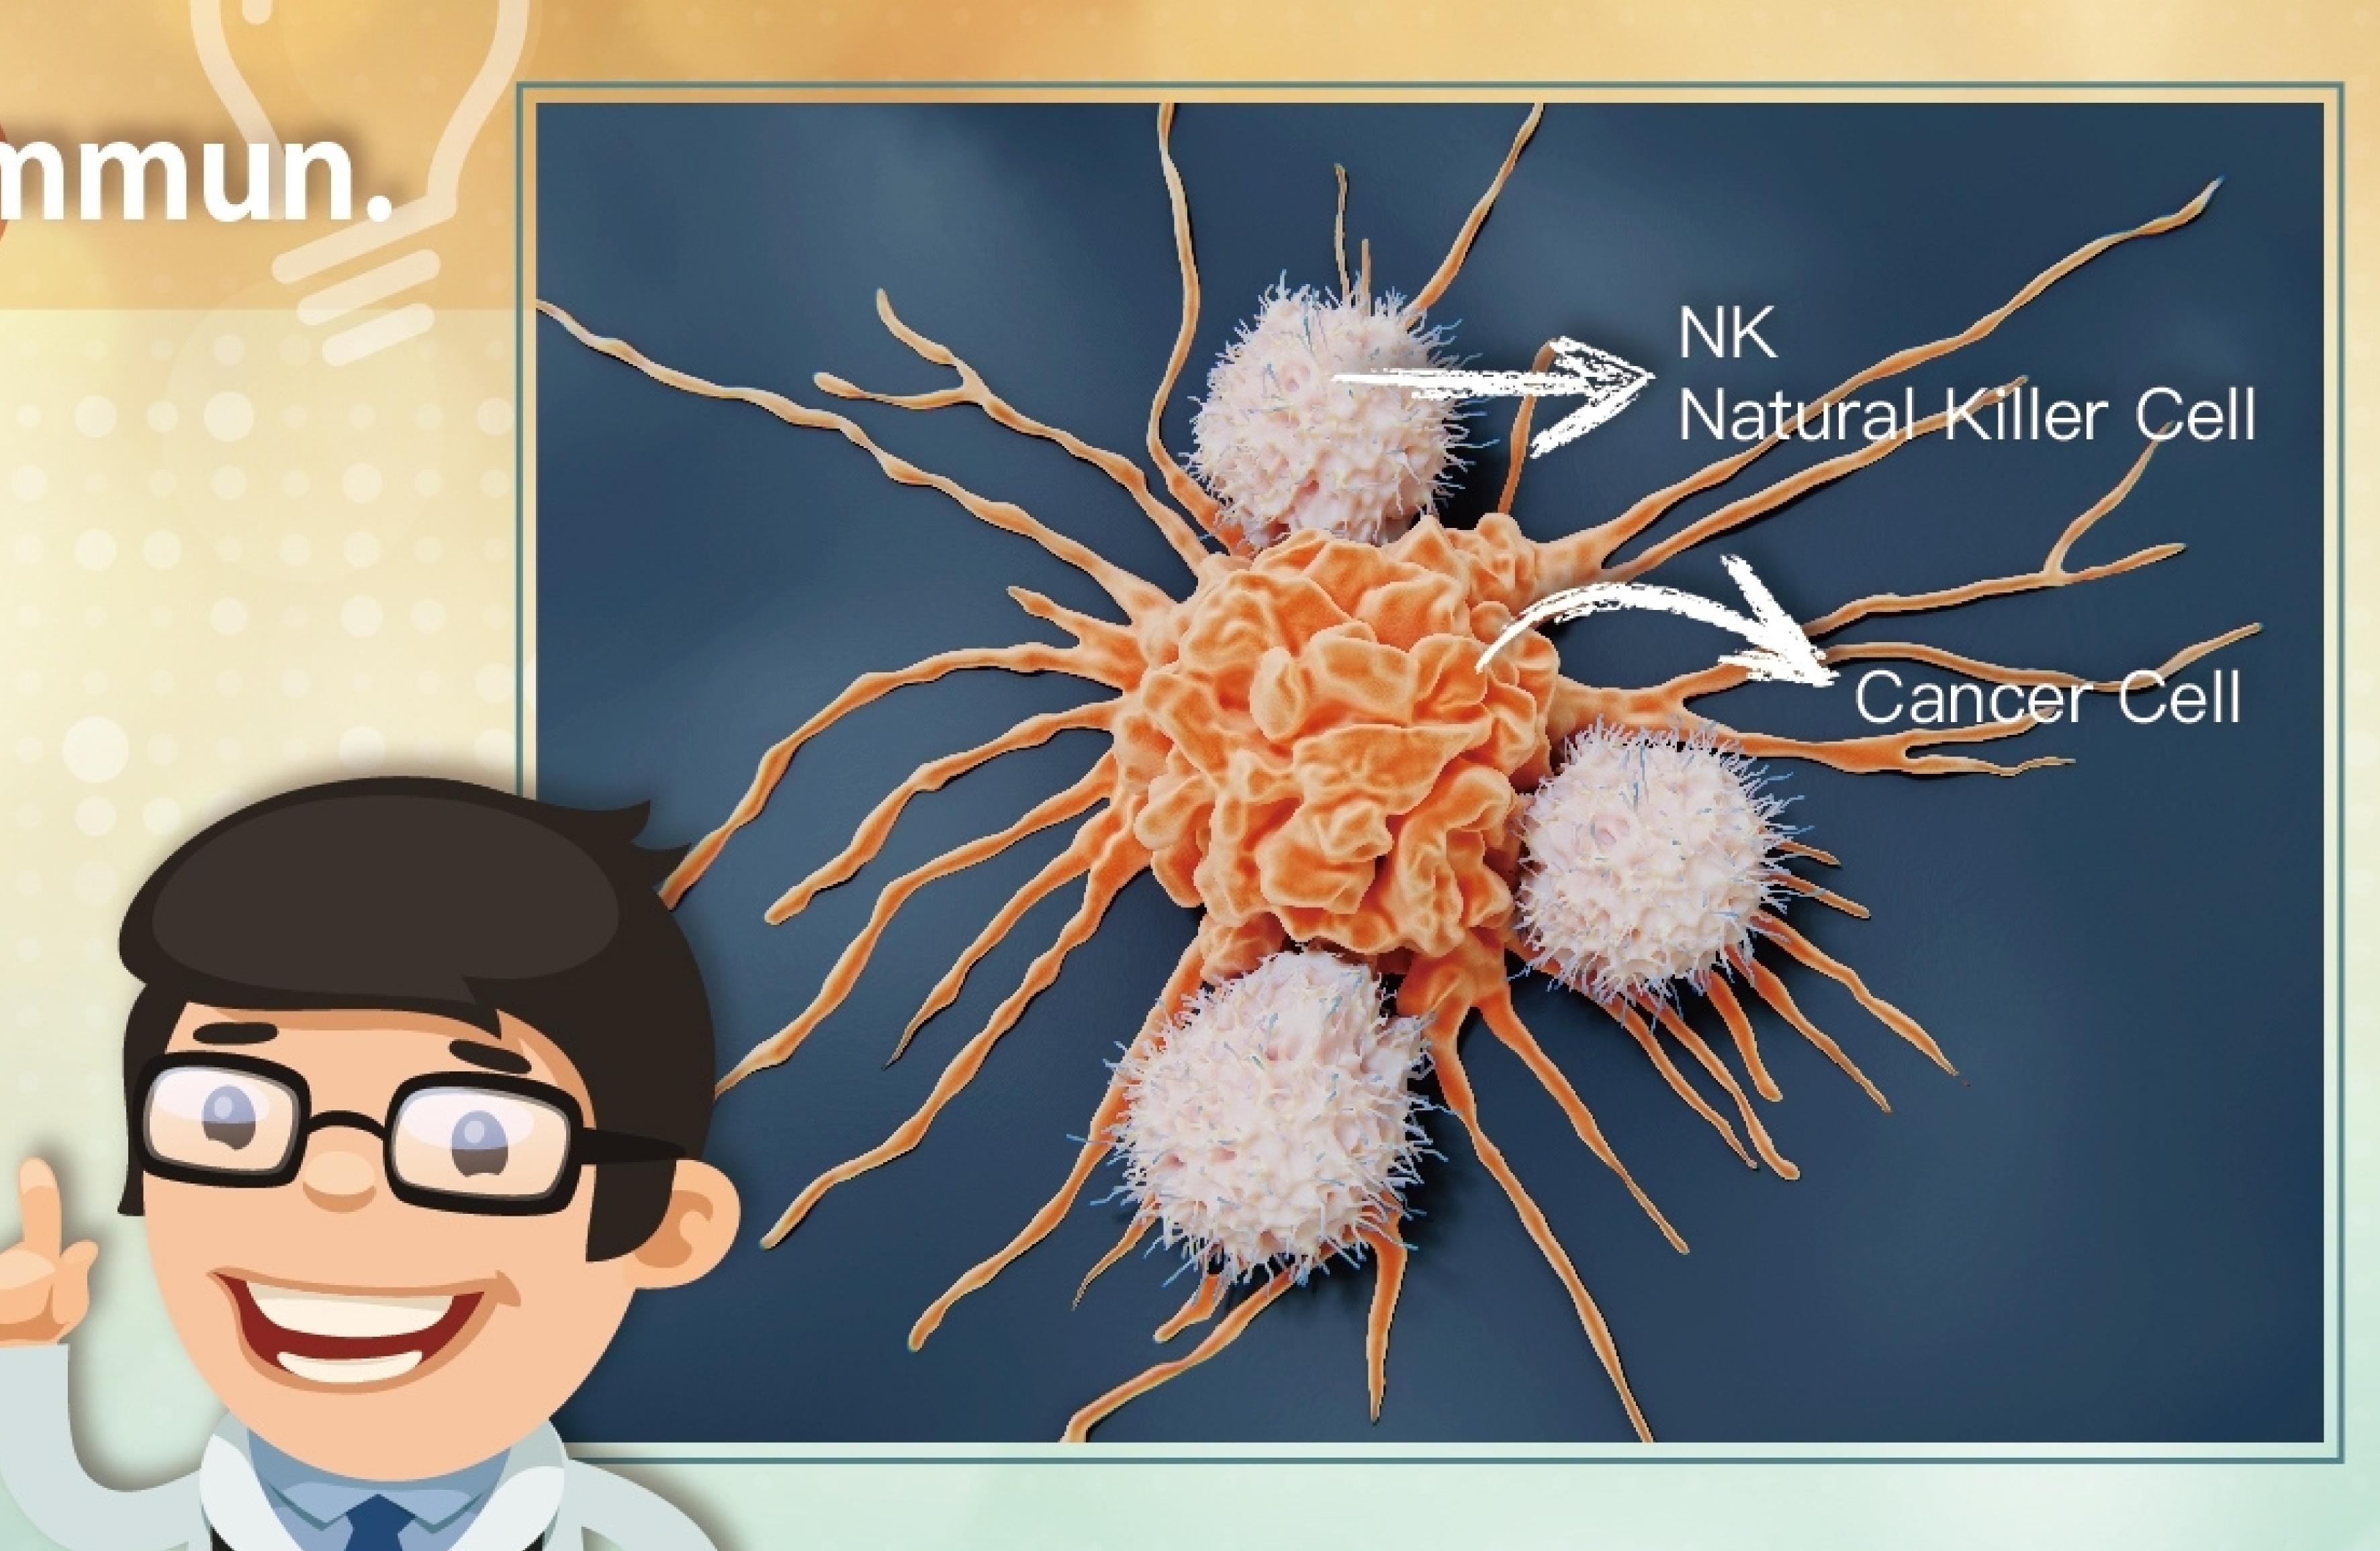

Some organs need two weeks, while others may take up to 20 years. However, the source of regeneration is stem cells.

Do you know the number of your own CD34⁺ stem cells and NK natural killer cells?

NK Natural Killer Cell Immun.

CD34 stem cells differentiate into NK natural killer cells, forming a powerful immune army. They autonomously search for cancer cells even in the absence of antigens and secrete perforin to induce apoptosis in them.
