Protect

A Need For Action

Vehicle attack is a pervasive modern day concern that continues to plague both Europe and the US. Any location that puts pedestrians adjacent to unrestricted vehicles risks the possibility of injury and death and the consequent cost to reputation and future revenues. Preventative planning is essential to mitigate this threat.

144 Deaths

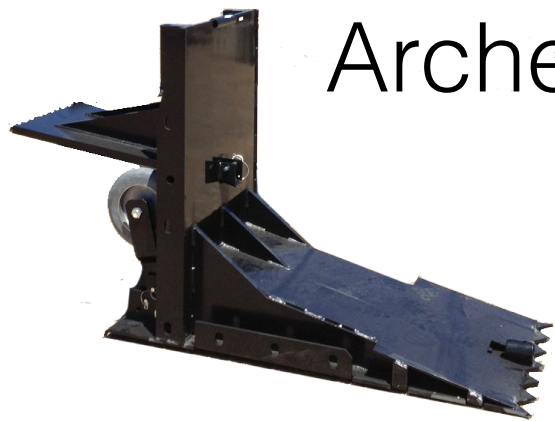

And thousands injured in just the last 2 years from vehicle attacks.

Passive Protection

Portable barriers protect areas from vehicle entry while still allowing for unimpeded pedestrian flow.

Drop & Stop Solution

Archer 1200

Meridian barriers are modular by design to respond to changing deployment needs. They are used for road/lane closures and to protect pedestrian areas from vehicle entry. With crash test ratings to both the US DOD and Europe's PAS 68, they are the best option for temporary and responsive protection.

- Portable for responsive protection
- Non-lethal to driver on impact
- Easily moved for emergency vehicle access or evacuation if needed

Customer Support
