POMS Delivers Smart Manufacturing

POMSnet™

Microsoft .NET · HTML5 · nymi™

Web based or cloud based options available.

POMS Corporation offers comprehensive 3rd Generation 100% Web or secure Cloud based Manufacturing Execution System (MES) and Enterprise Manufacturing Intelligence (EMI) products for Biopharmaceutical, Medical Device, and Consumer Packaged Goods manufacturers. Now integrated with Nymi Enterprise Edition that enhances security, which leads to improved data integrity and thus allows an enterprise to meet its compliance mandate all while increasing productivity.

"Be able to 'scan and e-sign' in one step is the bulk of the benefit, replacing typing the 'old age' user + password method."

Barry Stewart,
MES Automation Integration Business Analyst, AstraZeneca.

"Touchless biometric security, compliance, and productivity"

Nymi Delivers onbody, biometric enabled security for better compliance and productivity.

Protected Data Integrity

Nymi Enterprise Edition is able to assure the integrity of the data being produced on the manufacturing floor through a combination of biometrics, on-body detection, and strong industry-standard cryptography.

Assured Compliance

Only the right employees can perform the right tasks, at the right times, for the right reasons. Nymi Enterprise Edition provides guaranteed data integrity that assures compliance with standards, such as FDA 21 CFR Part 11.

Enhanced Security

A Nymi Band authenticates to a single assigned user, and only while they wear the band. Nymi Enterprise Edition provides easy traceability and non-repudiable electronic records, which makes simplier, less intrusive audits a reality.

Increased Productivity

Secure, non-repudiable, wireless taps of the Nymi Band make cumbersome repetitive tasks, like typing passwords and paper signatures a thing of the past.
