Zobox Press Release 5th January 2018

New company Zobox launces two IoT products at CES 2018

Zobox launching a personal GPS tracking device and alarm, and a clever device to reboot your router if your Internet fails.

Zobox are a new start up who are launching two new IoT devices at CES 2018, January 9th to 12th. Zobox are exhibiting in the Eureka Park at the Sands Convention Center. Booth #51063

Zobox will be showing off their two new products, Zobox Beacon and Zobox Router Rebooter. Zobox are raising funds to expedite production through an Indiegogo crowd funding campaign.

"Zobox are delighted to be launching these two fantastic products at CES. Both Beacon and Router Rebooter are truly useful devices that really work and provide real world solutions. We have already had a terrific reaction to both products and we are looking forward to bring these great products to a wider audience." Said JP Lynch, CEO at Zobox.

Zobox Beacon

The most advanced global GPS tracking device ever. Zobox Beacon is a personal GPS tracking and alarm device with global coverage. Zobox Beacon can track your kids, your luggage, your pet, your car. It can tell you when your kid leaves the shopping mall, it can tell you when your luggage enters the baggage hall, it can tell you when you bike moves, and hundreds of other uses. All from the phone App.

Zobox Router Rebooter

Router Rebooter actively monitors your Internet connection 24/7, and automatically reboots your router when it fails. Router Rebooter, brings smart technology to the core of your connected home.

Modern homes have a growing number of connected devices, so a reliable connection is essential. Router Rebooter monitors your Internet connection and brings it back to life in the fastest time possible should it fail.

Zobox Router Rebooter sits between the router power plug and the router. When the internet loses connection the Router Rebooter cuts the power, waits a few seconds, then restores the power, forcing a reboot cycle that will fix most common connection issues.
