

RESOPS / DEVOPS Planning & Implementation

Resilient Operations (RESOPS) Planning Approach

Specific inquiries are generated to understand the challenges, objectives, and needs for evolving towards Resilient Operations

Data is identified, collected and baselined in accordance with the set of inquiries generated.

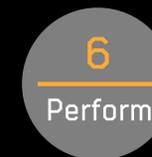

Environmental Assessment – Research, analysis, and information sourcing related to the direct and indirect impacts GEO-PESTEL factors may have on the strategic planning process.

Aligns strategic organizational inquiries, data-research-studies context and insights, and information flow and activities into a single approach for implementation, both strategic and operational focus in parallel.

A repository where planning and executing the "how to" decisions for actions are made. This is where the strategic blueprint is overlaid to schedule [periodicity, resource assignments, critical paths for execution]

Scorecard – A tool measuring progress towards achieving the desired strategic goals as captured in the blueprint.
