

COVID "Reopening" Technologies

COVID-19 is **dramatically** changing the way you need to run your building(s)! Let us help you, with these **3 highly relevant technology solutions** - all from our **Aware by BuildingLink team!**

In addition to the range of sensor solutions that **Aware by BuildingLink** has been deploying for its multi-family clients (fitness center, parking activity, leak detection...), we have selected and adapted the **below 3 technologies**, specifically for managing your building during the COVID and post-COVID environment.

#1 - Our NetVoice Annunciator enables you to effortlessly broadcast **one-time and repeating voice announcements** to any space(s) in your building
\$400 per annunciator + data service fee

Aware's **NetVoice Annunciator** allows you to broadcast **audio reminders and informative messages** to your residents and staff anywhere in your building! You simply send a one-time sms message - containing the announcement you want played - from your mobile device to your NetVoice Annunciator! Or, go to your Aware desktop webpage to schedule multiple timed or recurring announcements, or to specify **multiple languages!**

What might you want to share with your residents and building staff?

- Inform elevator riders of **maximum occupancy requirements**
- Urge cooperation in your lobby and mail-area, with **current best-practice announcements**
- Remind amenity-space users of **new policies and guidelines** while using those areas

Use the NetVoice Annunciator to ensure that your residents and staff are up-to-date on your building's current policies and procedures! **(And with the external audio jack, you can even pipe these announcements into your internal PA system!)** [Contact us](#) to learn more!

#2 - Our Mailbox Monitoring Solution Reduces Resident Traffic and Provides Convenient Notifications

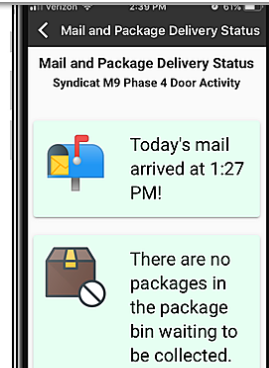

\$70 per sensor (hub required) + data service fee

Aware's **Mailbox Monitoring** solution makes it easy for residents to see when their **mail has arrived** (by

Providing work-from-home, and always-home residents with **real-time mail delivery info** will:

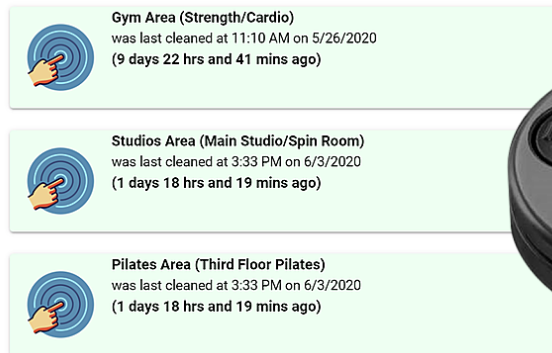

- **Reduce traffic in elevators, hallways, and mail-rooms**, by eliminating unnecessary trips to the mailbox
- **Free your front desk staff** from answering time-wasting "has the mail arrived yet?" resident phone calls

Residents and staff can conveniently check whether the daily mail has arrived by **accessing their BuildingLink mobile app** (or by visiting their BuildingLink website). Learn more [here](#).

#3 - Our **Button-Logging** technology helps you **shine a light on cleaning and other critically important scheduled staff activities**

\$70 per button (hub required) + data service fee

Aware's **Button-Logging Solution** is just that: one or more buttons which, when pressed, **logs an event, or the completion of a specific task** you've preassigned to it.

As one example, if you have set up **strict cleaning schedules** for sanitizing of amenity spaces and common areas, you can assign a dedicated button to each area. Your staff can be instructed to press the button assigned to each area when they have finished cleaning it. The logged button-press will:

- Provide **property managers** with a clear view of whether **cleaning schedules are being rigorously adhered to**
- Encourage staff to stay on top of their building hygiene responsibilities
- **Inform residents** of the most recent cleaning performed on an **area they wish to use**

Logged events can be viewed by staff and residents within their respective BuildingLink apps, or via their BuildingLink website. [Contact us](#) to learn more!

What else?

- Contact us if you're interested in utilization-tracking for your **fitness center** equipment. We've got a great, time-tested solution for that already!
- We have made some progress on **room-occupancy counting**, and **facial thermal scanning**. Let us know if these are solutions you are interested in.
